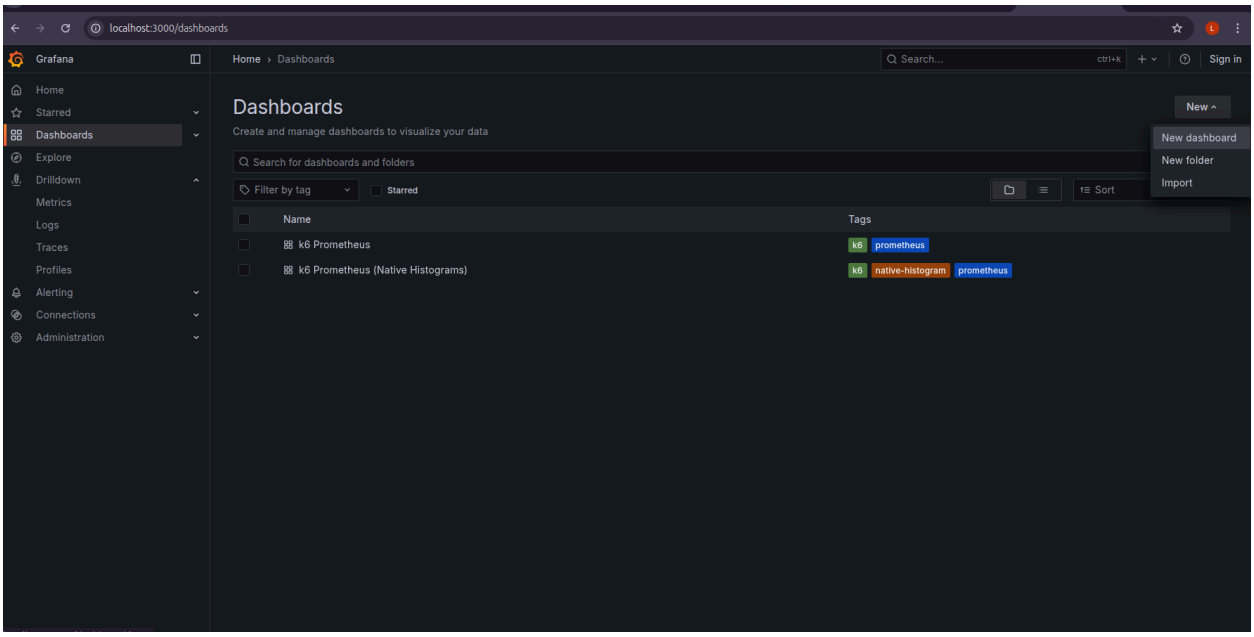
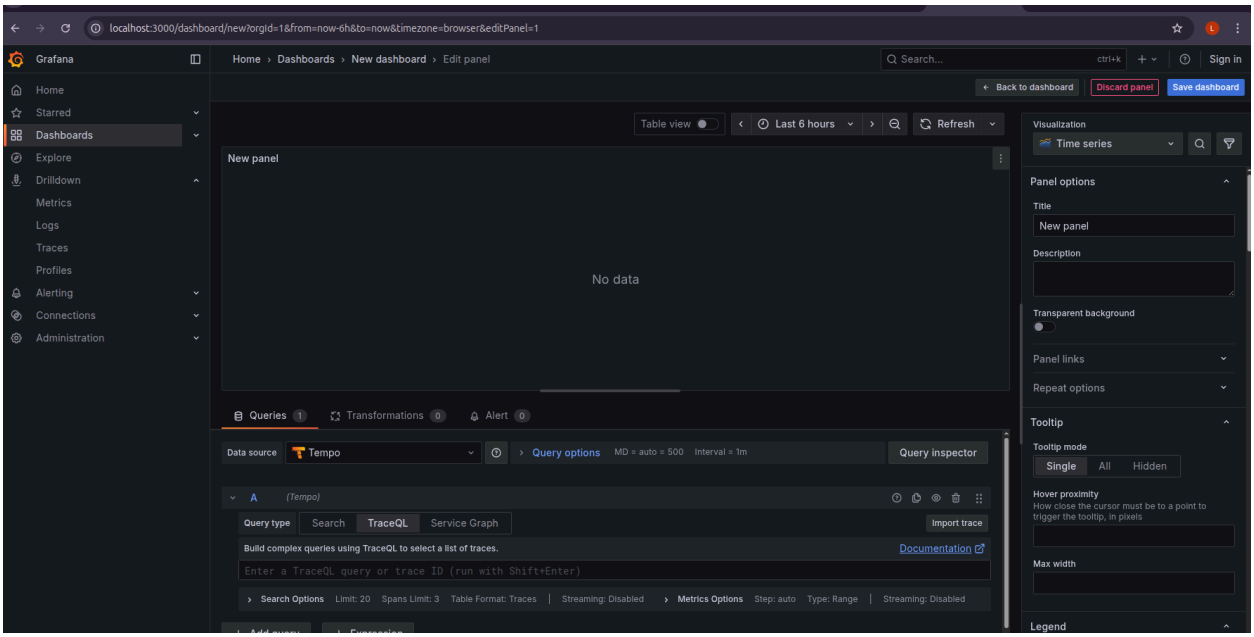
Dashboard for Traces

Let’s create dashboard for traces.

Go to dashboard section and create a new one for trcaes.



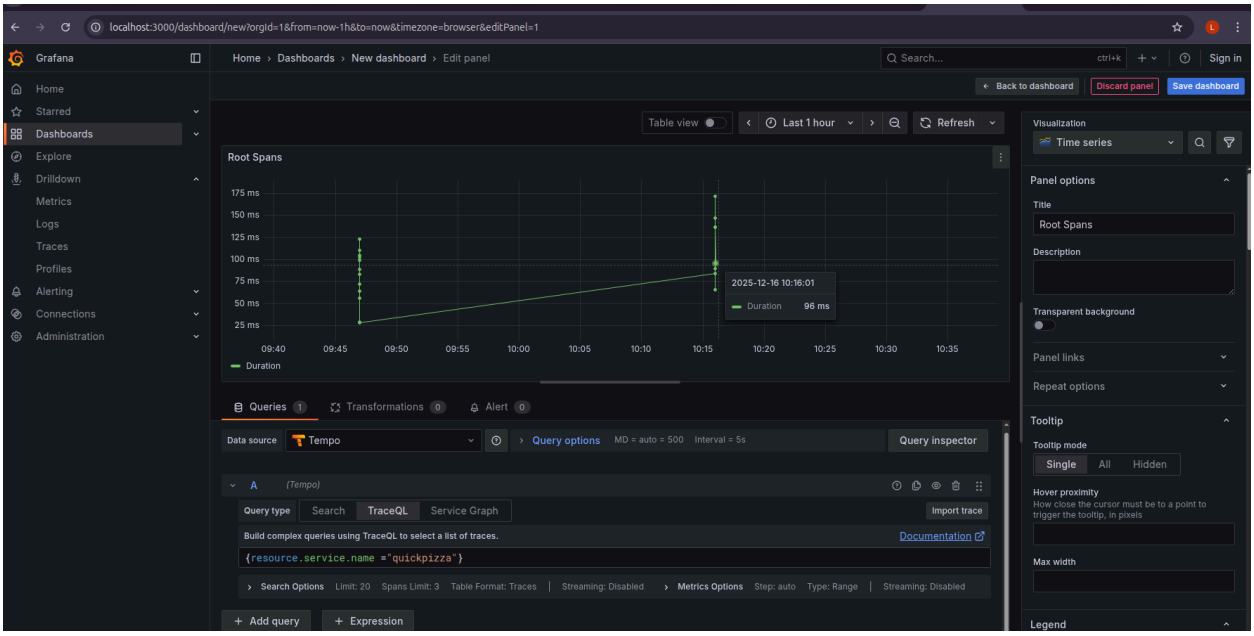
Add Visualization and select the “Data source” as Tempo.



Add a query to view only root spans.

Name the panel accordingly. Save the dashboard.

> 💡 If you are getting error saving the dashboard then sign in to grafana using “admin” as user and password both. Then try to create.

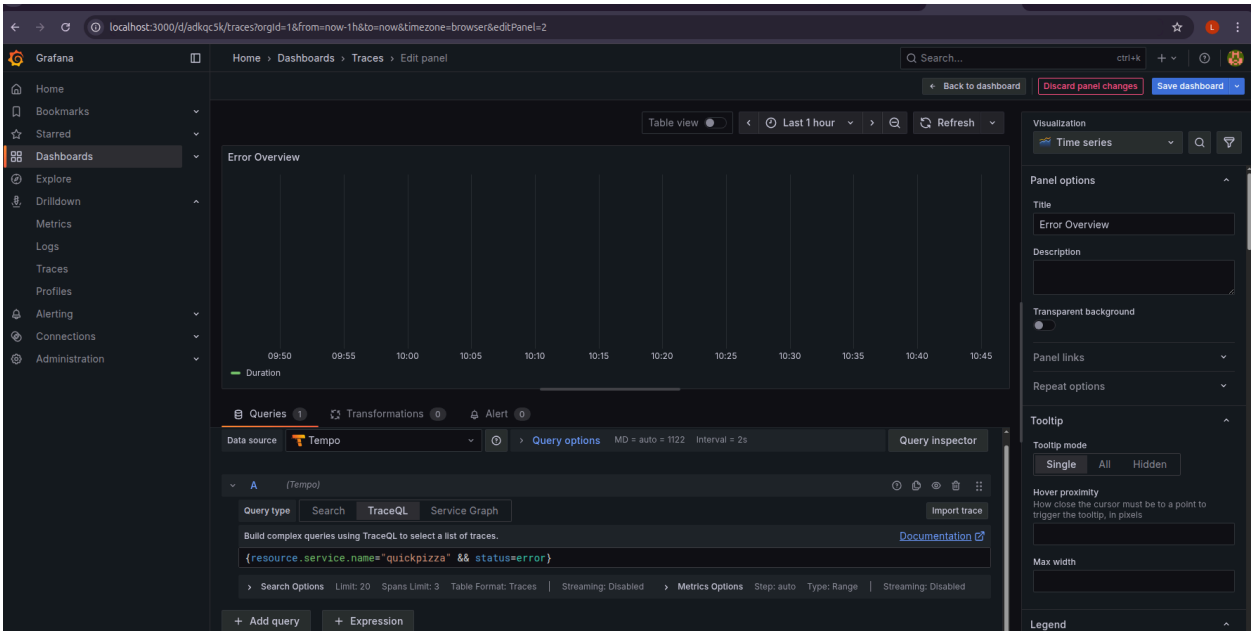


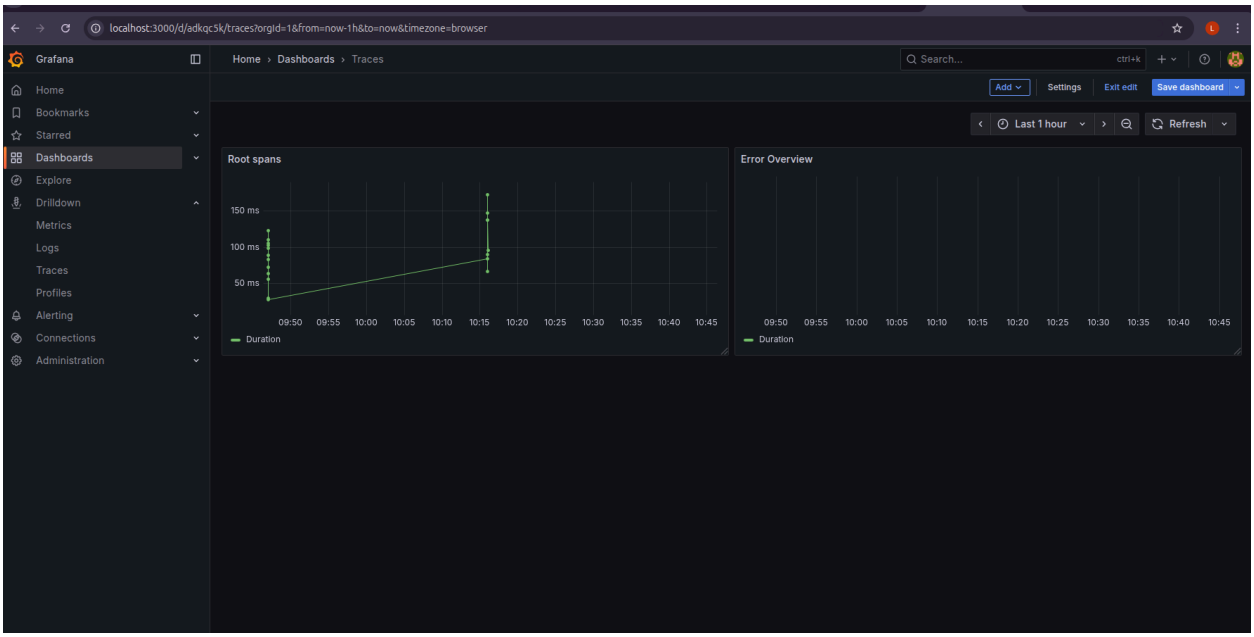
Lets create another panel for error detection.

Add the query mentioned below and save the dashboard.

I have used TraceQL to write query you can use the “search” for easy query.

Here there is no data because we did not have any errors in the application.





Here is the dashboard with 2 panels we have created. Create panels as per your need.
